

Lijit Needs a Web Designer/Developer

Lijit Networks, a Boulder, CO based provider of web-based search and discovery tools for online publishers, is looking for its next rock star to handle the design and development of the company's web-based presences, from its web tools to its website. The position, part of the company's products team, is integral to the iterative development process we have established, therefore we are looking at candidates on an initial contract basis with the goal of moving this position to full time. Given the team dynamic and agile-oriented development processes we have here at Lijit, the position must be here at our offices in beautiful downtown Boulder.

The persona we are looking for is as follows:

- As comfortable in a text editor or IDE as you are in Photoshop.
- Capable of turning a brief into a prototype into a new feature in very little time.
- Self motivated and driven to make our users blown away by our products.
- Plays well with others...e.g. software engineers, project managers, and product peeps.
- Experienced with a scheduled development process a la agile.
- Needs to be able to design for interactive applications (which is VERY different than for print or more static-type sites, so this bullet is VERY important)
- Leaving your legacy in web-based search technology.

The qualified candidate will be required to have the following under their belt:

- Bachelor's degree in computer technology, computer science, information systems, or related field
- 1-3 years of relevant work experience
- Expertise in standards-based HTML/XMHTML and CSS
- Wire framing experience to demonstrate designs as working prototypes, versus pure image file demonstrations.
- Expertise in achieving cross-browser and OS compatibility and operability.
- Experience debugging code
- Demonstrated experience with medium to large scale Web site development
- Excellent interpersonal, written, and oral communication skills
- Excellent analytical skills balanced with crazy-good design chops.
- Ability to handle multiple projects and deadlines. This is a software development house after all.

Preferred candidates will be required to have the following:

- Dramatically high cool factor and willing to push the team to new heights.

To apply, please contact jobs@lijit.com with a copy of your resume and references. Phone calls will not be accepted.
